

TESSUTO PER SERIGRAFIA

DIFFERENZA FRA TESSUTO BIANCO E TESSUTO COLORATO

Particolare importanza ricopre il colore del tessuto, in lavori molto delicati, quali potrebbero essere la quadricromia, la stampa di circuiti stampati, la stampa di linee sottili e di punti piccolissimi.

TESSUTO BIANCO:

durante l'incisione la luce emanata dalla lampada colpisce i fili, che, essendo bianchi, la riflettono ai lati indurendo l'emulsione.

RISULTATO: peggioramento qualitativo dell'immagine incisa.

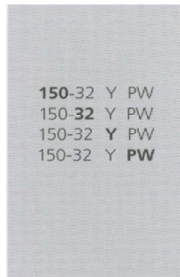

TESSUTO COLORATO:

anche qui la luce viene riflessa ma sono raggi inattivi, che non induriscono l'emulsione.

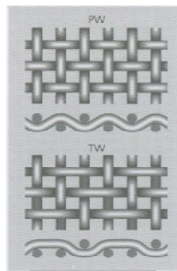

RISULTATO: immagine incisa nitida, priva di sbavature

I tempi di esposizione del tessuto colorato sono esattamente il doppio rispetto al tessuto bianco.

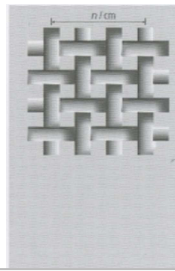

CARATTERISTICHE DEL TESSUTO

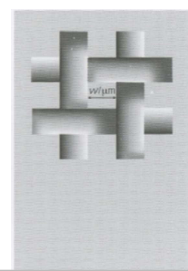

Numero del tessuto
 il numero si compone di:
 numero dei fili: 150-32 Y PW
 diametro del filo: 150-32 Y PW
 colore del tessuto: 150-32 Y PW
 (bianco=W, giallo=Y)

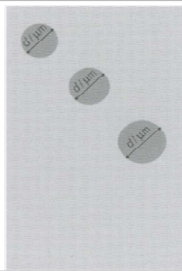

Armatura:
 PW 1:1
 TW 2:1

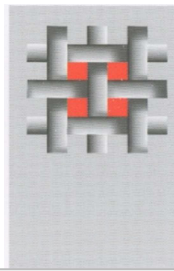

Nr. dei fili per centimetro:
 questo termine si riferisce al numero dei fili per centimetro sia

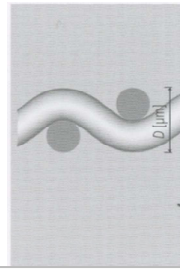

Apertura maglia:
 è la distanza misurata tra due fili

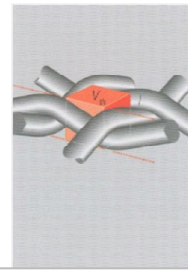

Diametro del filo:
 il diametro del filo è misurato prima della

Superficie libera:
 la superficie libera è il totale delle aperture maglie espresso in % della superficie totale del tessuto. La superficie libera è calcolata in base a dei valori medi della statistica delle aperture maglie e dello spessore dei

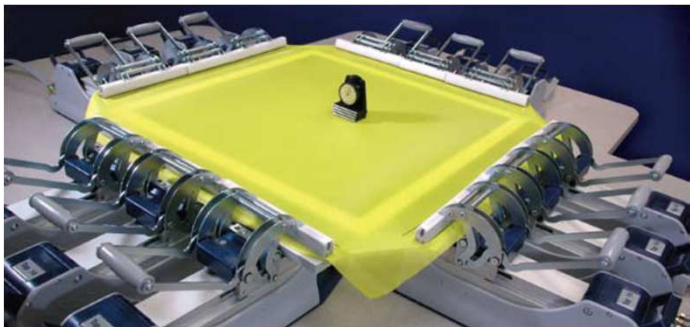

Spessore del tessuto:
 è lo spessore totale dei fili in trama ed ordito.

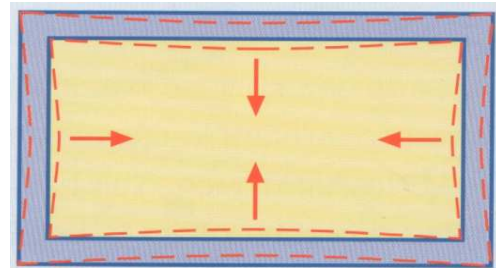

Volume teorico d'inchiostro:
 viene calcolato dallo spessore del tessuto e dalla % di superficie libera.

SISTEMA PNEUMATICO AUTOMATICO

L'AZIONE ESERCITATA SUL TELAIO NEL NOSTRO LABORATORIO

--- sotto tensione
 ————— dopo la tensione

Il nostro sistema pneumatico consiste in un set di pinze singole, in grado di tensionare qualsiasi tessuto per serigrafia. Progettato e costruito per ottenere le più alte tensioni che vengono richieste dai serigrafati per eseguire lavori di estrema accuratezza e precisione, tale sistema è unico nel suo genere, in quanto consente prima di tendere il tessuto spingendo la cornice verso l'interno, senza che questo entri in contatto con la superficie del telaio, poi abbassandosi tutte contemporaneamente appoggiano il tessuto sulla cornice da montare. Dopo aver incollato il tessuto alla cornice, il telaio tende a ritornare nella posizione iniziale controbilanciando la trazione del tessuto. I vantaggi sono molteplici: - telai a registro; - mantenimento della tensione costante e più a lungo; - un deposito più omogeneo dell'inchiostro su tutta la superficie stampata; - una giusta pressione della racla su tutta la sua lunghezza. Sono in uso presso il nostro laboratorio un quantitativo di pinze che ci permettono di tensionare telai fino ad una dimensione perimetrale di circa 15 metri.
